

Google Play Store Analysis Using Tableau

Executive Summary

Brief overview of the project, objectives, dataset, and key findings.

Introduction

The Google Play Store contains thousands of applications across multiple categories, serving millions of users globally. This project aims to analyze app performance, user engagement, ratings, reviews, installations, and pricing strategies using Tableau dashboards.

Objectives

- Analyze app popularity and installations
 - Evaluate user ratings and reviews
 - Understand pricing strategies
 - Identify top-performing categories
 - Generate actionable business insights
-

Dataset Overview & Data Preparation

Dataset Attributes

- App Name
- Category
- Rating
- Reviews
- Installs
- Type
- Price
- Content Rating
- Genres

Data Cleaning Process

- Removed "+" and "," from Installs column
- Converted Reviews to numeric format
- Removed "\$" from Price column
- Converted Price to numeric values
- Handled null values
- Corrected data types

Tools Used

- Tableau
 - Excel
 - Calculated Fields
 - Interactive Filters
-

Executive Overview Analysis

Dashboard Objective

Provide a high-level overview of Google Play Store applications.

KPIs

- Total Apps
- Total Installs
- Average Rating
- Total Categories

Key Insights

- Majority of applications are free.
- Average rating across the store is above 4.0.
- "Everyone" is the most common content rating.
- A small number of categories account for most applications.

Business Insight

Developers should focus on categories with strong demand while maintaining app quality to achieve better ratings.

App Popularity & Install Analysis

Dashboard Objective

Understand app popularity through installation metrics.

Key Visualizations

- Top Categories by Installs
- Top Installed Apps
- Installs vs Ratings

Key Findings

- Game category generates the highest installs.
- Communication apps are among the most downloaded.
- Top Google and Meta applications dominate installation counts.

Business Insight

High-install categories provide large market opportunities but also intense competition.

Rating Analysis

Dashboard Objective

Evaluate user satisfaction through ratings.

Key Visualizations

- Top Categories by Average Rating
- Average Rating by Content Rating
- Free vs Paid App Ratings
- Reviews vs Ratings

Key Findings

- Events and Education categories show high average ratings.
- Paid apps have slightly better ratings than free apps.
- Most categories maintain ratings above 4.0.

Business Insight

User experience and application quality are major drivers of ratings.

Reviews & User Engagement Analysis

Dashboard Objective

Measure user engagement through review behavior.

Key Visualizations

- Top Apps by Reviews
- Reviews vs Installs
- Average Reviews by Category
- Top Categories by Reviews

Key Findings

- Facebook is the most reviewed application.
- Review counts increase with installs.
- Social and Gaming categories generate significant engagement.

Business Insight

Applications with strong community interaction tend to receive more user feedback.

Pricing & Monetization Analysis

Dashboard Objective

Analyze pricing strategies across applications.

Key Visualizations

- Top Paid Apps by Price
- Average Price by Category
- Price Distribution
- Price vs Rating

Key Findings

- Most applications are free.
- Most paid apps are priced below \$10.
- Higher prices do not guarantee higher ratings.

Business Insight

Affordable pricing and freemium models appear to be more successful than premium pricing models.

Recommendations

For Developers

- Focus on app quality and usability.
- Encourage users to leave reviews.
- Maintain competitive pricing.
- Target high-demand categories.

For Businesses

- Monitor user ratings continuously.
 - Use review analytics for product improvement.
 - Invest in categories with strong engagement.
-

Conclusion

This Tableau project successfully analyzed Google Play Store data through five interactive dashboards covering app popularity, ratings, reviews, user engagement, and monetization.

Final Conclusions

- Game category leads total installations.
- Facebook is the most reviewed application.
- Free apps dominate the Play Store ecosystem.
- Ratings remain consistently high across categories.
- Reviews are strongly associated with installations.
- Pricing has limited impact on app ratings.

The project demonstrates how data visualization can transform raw application data into meaningful business insights that support data-driven decision making.
